

Our work on safety, environment and quality shall be characterised by an open, responsible dialogue with our internal and external stakeholders. We shall continuously drive our improvement work forwards in order to exceed the expectations and requirements of our stakeholders. This undertaking applies to everyone who works within Scanspac's operations.

Safety

Safety is a fundamental element of Scanspac's operations and is present in all our processes and in everything we manufacture. Our vision is zero accidents and work environment-related illnesses.

All employees at Scanspac are ambassadors for our safety work, where safety always comes first. We strive to set good examples and to create awareness of procedures for safety solutions and to promote a strong safety culture. Our safety work is wide-ranging, which is why we offer products and solutions that promote safety throughout the value chain.

Environment and sustainability

Our vision is to drive the development of surfaces in order to create good living environments and a sustainable future. We demonstrate our environmental commitment by constantly improving the environmental impact of our products throughout their life cycle. With our stance on the whole spectrum of sustainability, we shall provide the world at large with innovative solutions to further enhance our competitive strength.

Quality

By understanding the needs of our stakeholders, we shall continuously improve our processes in order to exceed expectations and requirements. We therefore undertake responsible improvement work in which all employees assume personal responsibility for quality in their process. We are a learning organisation that works every single day to improve our customers' experience by means of relevant key indicators and knowledge of our processes.

Scanspac, Glanshammar, 29/09/21
